ANGRU

Applying kNowledge Graphs to research data ReUsability

ANGRU is a subproject of the **ANGLIRU** (**Applying kNowledge Graphs to research data interoperabiLIty and ReUsability**) project.

ANGLIRU aims to increase the amount of **research data** available to researchers so that they are **easier to find**, there are no difficulties in **accessing** them, and multiple data sources can be **integrated semi-automatically** and their **reuse conditions** are clear to give confidence to all parties involved. All with the aim that more impact and quality research results can be achieved.
